Webinar #2: Innovation to inclusion – Monitoring tool

Juan Ignacio Perez Bello
Consultant
Why Bridging the Gap I?

• Conceived before adoption of the 2030 Agenda

Objective:
To contribute to the socio-economic inclusion, equality, non-discrimination of persons with disabilities, by:

- Supporting the implementation and monitoring of the CRPD through the elaboration of human rights indicators

- Supporting SDGs implementation guided by the CRPD (policy guidelines and data sources guidelines)
Human rights indicators on the CRPD

- Based on OHCHR Methodology

- Cover all articles of the CRPD from 1 to 33 (cases of 1/4 and 15/17)

- Incorporates SDGs indicators under specific CRPD Articles, requesting disaggregation by disability where not foreseen.

- Developed between 2017 and 2019 (about to being finalized)
  - Validation meetings with stakeholders (DFP, NHRIs, NSO, and OPDs) from 5 countries (Ehiopia, Jordan, Moldova, Nepal, and Paraguay)
  - Online consultations in 2019: input from UN Agencies (10), NHRIs (4), OPDs and CSOs (9)

- Meanwhile, drafts from July/August 2019, available online in OHCHR Website
Human rights indicators on the CRPD

• Indicators

• **Structural = measure commitments**
  E.g. “Legislation enacted on ...”

• **Process = efforts and actions by the State**
  E.g. “Proportion of staff trained on...”
  E.g. “Proportion of requests of procedural accommodation granted...”

• **Outcome = results in the enjoyment of the right**
  E.g. rates on persons with disabilities compared to others
  E.g. Voter turnout of persons with disabilities
Human rights indicators on the CRPD

• Article 27 (work and employment)

• Article 28 (Adequate standard of living and social protection)
Concerns – Document on FAQs

1) The high number of indicators
   • These **human rights** indicators seek to cover all areas of CRPD, to be comprehensive not to overlook any right or constituency.

2) Data availability and development of metadata for the indicators
   • NO guidance on data collection methods FAQ 8 to 12.
   • Metadata for contextualisation

3) Suggested content and language for indicators

4) Better presentation or placement of issues
   Eg. Psychosocial disability on 12, 14, 15/17, and 19 **concepts, messages and/on target/purpose** of the indicator (what would exactly be needed to be measured).

5) Better reflection of specific constituencies among persons with disabilities, including under-represented groups and intersectionality
   (Eg. indigenous persons with disabilities)
Data sources guidelines

• Practical document directed to policy makers

• Link indicators with existing data sources (regardless of discussions on data collection methods and disaggregation)

• Showcase examples to
  – Show that certain information is being produced
  – Trigger the search for it or actions to start systematizing or collecting information
Policy Guidelines

• On-going process (to be finalised during 2020)
  • There will be specific guidelines on Goal 1 and Goal 8, relevant to the topics of this webinar.

• Directed to policy makers

• Purpose: to provide with disability policy guidance to implement SDGs including persons with disabilities, including key actions
  •
  • Establishing connections with human rights indicators and data sources guidelines, where appropriate
Thank you for your attention
