

Climate Justice

Climate change is how the temperature of the earth is rising because of things like pollution.

It is causing extreme weather.

Climate justice is when people come together to try to find solutions to climate change.

EDF and CBM Global made a video on inclusive climate justice.

In the video people from many countries talk about:

- How climate change affects people with disabilities
- How people with disabilities can help find solutions to climate change.

Watch the video here:
